VEGETABLE SEEDS

Standard Varieties New and Old

There has existed for years a custom among seedsmen of cataloguing New and Special Seeds separate from the Old Standard sorts. This not only compels you to look in two places in the Catalogue to compare descriptions, but also has often largely over-drawn the merits of new varieties.

We put New and Old together this season and have endeavored to make the descriptions honest and impartial.

KECKLEY SWEETS WATERMELON

New Irish Grey Watermelon

This is a distinct and very valuable Melon, the productiveness is wonderful, producing more good merchantable Melons under the same conditions than any other variety; the eating quality is all that could be desired in a Watermelon, the sparkling red flesh is very sweet and entirely free from hard centers or stringiness, yet the flesh is very firm and compact and will not break when sliced. The size is uniformly large, color of rind, yellowish grey and almost as tough as that of the Citron, ripens earlier than Tom Watson and will keep in good condition for a long time after picking and stand long distance shipping better than any other Melon; for comparison the grower claims it will carry 1,000 miles distance and ship back over the same route, then open as good as fresh picked Tom Watson. Another important feature, the rind will not sunburn, and will keep in good condition for several days in the sun after becoming ripe, while all dark rind Melons will blister yellow on the top, which renders it unsaleable. The Irish Grey is beyond the experimental stage and you need not hesitate to plant it extensively. It is the best home market Melon as well as the best shipper; you will make no mistake to try it. Golden Hubbard

A form of the Hubbard similar to the green Hubbard. Preferred to the green Hubbard by some. **Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 15c; lb. 85c.**

BANANA Squash

This Squash is a heavy yielder and the best all-purpose variety ever grown. Can be used when quite young and will keep splendidly for a Winter Squash. The color is grayish-green, shell soft, so that it can be cut with a knife. It grows from 18 to 30 inches long and 6 to 9 inches in diameter. It is very prolific, but a shy seeder. Flesh is of high color; entirely free from stringiness or fibre. Cooks up perfectly smooth and is of most delicious flavor. Yields well and is of such superb table quality that many growers will have no other for their own use. Matures rather late and should be planted early if very large fruits are desired. **Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 60c; lb. \$1.75.**

TOMATO

Wonderful JOHN BAER Tomato

BEST EARLY TOMATO ON EARTH

This wonderful, large, beautiful, early Tomato has produced a crop in 30 days from well matured plants. It is of most perfect shape, of glistening, brilliant red color. Extra solid, heavy fruit and ripens up evenly. Plants produce 50 to 100 perfect Tomatoes each. (None cracked, uneven or rough.) The flavor is extra fine, mild and delicious. They are very even in size, weighing 6 to 7 ounces each, extremely solid with very few seeds and will stand shipping a long distance. It is very hardy and productive, and vines are loaded with bright, glossy red fruit. Pkt. 5c; $\frac{1}{2}$ oz. 10c; oz. 20c; $\frac{1}{4}$ lb. 75c; lb. \$2.80.

Bonnie Best

Earlier than Chalk's Early Jewel. A vigorous grower, enormously prolific. Color is intense scarlet. Shape is perfect and remarkably uniform in size. Ripens evenly to the stem without crack or black spot. Very productive and a fine shipper, being even in size. Pkt. 5c; $\frac{1}{2}$ oz. 10c; oz. 20c; $\frac{1}{4}$ lb. 75c; lb. \$2.75.

BEEFSTEAK Tomato

The name Beefsteak has been given to several Tomatoes, which are especially noted for a solid, meaty core and unusually large size. The Beefsteak Tomato possesses these good points—heavy, solid, fine flavored, meaty flesh, etc., and is, we think, one of the best varieties grown. Vigorous grower, very productive and continues to produce large sized fruits until frost. Its luscious fruit is large to extra large; very meaty and solid, with few seeds. Its color is a brilliant shade of red and one of the most beautiful Tomatoes we have ever seen. Foliage heavy, protecting the fruit from sunscald during late summer. Pkt. 10c; $\frac{1}{2}$ oz. 15c; oz. 25c; $\frac{1}{4}$ lb. 95c; lb. \$3.50.

WONDERFUL JOHN BAER TOMATO.

EARLIANA Tomato

Special Selected Strain

The Earliana has for several years been the standard extra early. Our grower has worked up a special strain of this, improving it in every possible way. Our strain of this first early sort is earlier and decidedly superior to much that is sold as Sparks' Earliana, and the extreme earliness of its large, smooth fruits makes it a very desirable Tomato for market gardeners, as well as desirable for the home garden. The vines are small, but vigorous and productive. The fruits are scarlet, medium to large, nearly round and exceptionally smooth for so early a variety. The fruits are borne in clusters near the base of the plant and the bulk of the crop ripens very early. Pkt. 5c; $\frac{1}{2}$ oz. 14c; oz. 25c; $\frac{1}{4}$ lb. 95c; lb. \$3.25.

Alpha Pink

It is very desirable for slicing. Pkt. 5c; $\frac{1}{2}$ oz. 15c; oz. 28c; $\frac{1}{4}$ lb. \$1.00.

BEEFSTEAK TOMATO—Big, Heavy, Solid Red

OO SOME EXTRA GOOD TOMATOES OO

Yellow Ponderosa Tomato (Shown Above)

Similar to Ponderosa except in color which is a clear yellow. This giant Tomato is unquestionably the best large yellow variety. DEPOSIT BIG DWARF

MAMMOTH TOMATOES ON DWARF ERECT VINES.

This big fruited but erect-growing variety is one of the most important advances made in recent years in the line of Tomatoes, especially adapted to home gardens. Those who have attempted in the past to grow Ponderosa with its sprawling habit of vine may now have the same quality of fruit on strong, erect vines, requiring only one-fourth the space. The main stem or stalk grows about 20 to 24 inches high and is very stiffly erect. The fruits are immense, making Big Dwarf by far the largest fruited erect-growing sort in cultivation. The color is a rich crimson tinged with purple, making it surprisingly attractive when exposed for sale. Pkt. 8 cts.; $\frac{1}{2}$ oz. 20 cts.; oz. 35 cts.; $\frac{1}{4}$ lb. \$1.25; lb. \$4.25 prepaid.

This sort is cultivated extensively in the South for the tops which are used for greens. In many sections it is a favorite green feed for stock and its use like Rape for a pasture crop is quite general. This sort is very hardy and the growth usually continues throughout the winter. The variety is not generally depended on for the root since the tops are produced so abundantly. Pkt. 5 cts.; oz. 8 cts.; $\frac{1}{4}$ lb. 18 cts.; lb. 55 cts.; 3 lbs. for \$1.50 by mail.

DELUE'S GOLDEN GIANT SWEET CORN

A giant Sweet Corn, large as Evergreen and earlier than Golden Bantam.

Will grow over 20,000 marketable ears to the acre which at the lowest market price would net at least \$1,000.

Will sell for twice as much as other corn on the market.

We can only confirm all that he states in his circular which we have mailed you today under separate cover, and this after we have grown many acres of it this past season, that we find it some three to five days earlier than Golden Bantam sweet corn, with ears much larger, and to yield twice as much per acre than the Golden Bantam. We also find the quality superior to that of the Golden Bantam, making it the most wonderful, early, productive, large eared yellow sweet corn grown in our forty-seven years of experience of growing sweet corn.

DeLue's Golden Giant excels all other varieties in size, productiveness and quality, and all of the late varieties in quality and early maturity. It is the one corn for the market gardener who wants the greatest amount of the highest quality corn in the shortest period of time from the smallest piece of land. It is because of the extreme tenderness, com-

In 1916 awarded the only medal given for sweet corn by the Massachusetts Horticultural Society in nearly 100 years, and each succeeding year since then it has been awarded first prize by the same society. In 1920 it won first prize and sweepstakes for best single ear at the corn show of the Massachusetts Department of Agriculture. In 1921 it won first prize, sweepstakes and medal for best ten ears at the corn show of the above Department. If you want the best, grow DeLue's Golden Giant.

It is the earliest Dent Corn in cultivation.

It is the most beautifully colored corn.

It grows strong and quick to a height of 7 to 8 feet, making fine fodder.

It will mature where early Canada Flint corn will. In Canada, Maine, Vermont or New York State. Claimed to be 10 days earlier than early Canada Flint.

Has produced sound, ripe crop of corn in 70 to 80 days.

Ears 8 to 10 inches long with 12 to 16 rows of large kernels.

1/4 lb. 12 cts.; lb. 35 cts.; 2 lbs. \$1.00; 7 lbs. \$2.00

bined with the exquisite rich sugary flavor, that the Golden Giant has become the standard of perfection for sugar corn, and when you consider that its admirers report that it is one or two weeks earlier and two or three times as large as its own parent, the Golden Bantam, of better quality, deeper color and more productive, you may be sure that it has well earned the title of "The New Master of the Fields."

White Wonder Cucumber

Color of White Wonder is a beautiful pure snow white. It grows to good size, usually 8 to 10 inches long, and is very uniform. In season almost the same as the White Spine, but keeps in eatable condition longer. Flavor is pleasing and flesh firm and crisp—fine sliced or in salads. Its smooth, clear surface makes the White Wonder an ideal pickle. Aside from excellent qualities of fruit White Wonder bears a great quantity of them. A packet of seed will furnish you cucumbers in abundance. Pkt. 5 cts.; oz. 15 cts.; 1/4 lb. 45 cts.

Albino or White Beauty Tomato

For years it has seemed impossible to propagate a pure white Tomato of good quality, but the impossible has been accomplished. The New White Beauty contains absolutely no acid and so will make tomatoes agreeable to thousands of people who have heretofore avoided them on account of the acidity.

White Beauty is ivory white in color, showing no trace of red and the flesh is almost paper white. It grows about as large as Stone and is firm and solid, carrying very few seeds. Ripens medium early. Fine to grow for exhibition with red and yellow varieties.

This is absolutely the best white tomato to be had. The supply is limited. Price, 10c per pkt.; 1/2 oz. 35 cts.; oz. 60 cents.

New Golden Colossal Tomato, pkt. 10 cts.

HERBS, FARM, GRASS and FORAGE SEEDS

SUDAN GRASS

DWARF ESSEX RAPE

This is by far the best variety of Rape for forage crop and it affords excellent pasturage for hogs and sheep late in the season. The plant of Dwarf Essex resembles at first the Ruta Baga, but the tops become very leafy and large. As a cheap fattening food for sheep in the fall it is without a rival. By sowing a small patch and turning sheep on to feed you do away with poor lambs. You have only fat ones for market. All stock does well when fed Rape. Can be sown in spring or as late as July. Oz. 5 cts.; $\frac{1}{4}$ lb. 12 cts.; lb. 35 cts.; 3 lbs. 75 cts.; 7 lbs. for \$1.50

WHITE CLOVER

The dwarf spreading or creeping variety with white, sweet-scented blossoms. This is very desirable for lawns; also very valuable for pasture. $\frac{1}{4}$ lb. 25c; lb. 85c; 2 lbs. \$1.50 by mail.

LAWN GRASS

We have prepared a good mixture of grasses suitable for a fine, rich, smooth lawn. These are made up largely fine of grasses that are very hardy. $\frac{1}{2}$ pt. 10c; qt. 35c; 3 qts. 75c; 7 qts. \$1.50; 15 qts. \$3.00 by mail.

Sow plenty of seed so it will be thick. Seven quarts is none too much for a large lawn.

It is a tall, annual grass reaching a height of 7 feet when planted in rows and allowed to mature for seed crop; broadcasted and cut in the bloom for hay about 4 feet. The results have been so satisfactory that it is now established one of our permanent forage crops. It is easily cured and handled as a hay crop. Stock of all kinds eat it readily and will leave any other hay for it. The food value is second only to alfalfa. Should not be planted until the soil becomes warm in the spring. Two to four cuttings per year can be obtained when sown broadcast for hay, the number of cuttings secured depends upon the length of the season and the moisture. The first crop will mature in from 50 to 60 days, and the second crop is ready for harvesting in from 20 to 30 days. Three tons of cured hay per cutting per acre has been secured, and three cuttings made. It is a great drought register and is particularly adapted to semiarid regions. It is an annual and must be seeded each spring. When seeded in rows 18 to 20 inches apart, drill 4 to 6 lbs. When sown broadcast 16 to 24 lbs. per acre. Oz. 5 cts.; $\frac{1}{4}$ lb. 15 cts.; lb. 40 cts.; 3 lbs. 90 cts.; 7 lbs. for \$2.00 by mail.

MAMMOTH RUSSIAN SUNFLOWER

Tall, large-growing with mammoth seed heads; used to cut up in ensilage; also for poultry feed. Oz. 8 cts.; $\frac{1}{4}$ lb. 15 cts.; lb. 45 cts.; 8 qts. \$2.25.

TIMOTHY

This is one of the best known and most extensively grown of all grasses for hay. If seeded with Clover it makes the best possible meadow when the Clover dies out. Good seeding lasts for years. $\frac{1}{4}$ lb. 10c; lb. 28c; 2 lbs. 50c; 5 lbs. \$1.00; 12 lbs. \$2.00 by mail.

JAPANESE BUCKWHEAT

Considered the earliest and best Buckwheat grown. Straw and kernels large, and always produces a big crop where any sort succeeds. Experience has demonstrated that the fertility of the soil can be restored by sowing Japanese Buckwheat and plowing it under. It is equally valuable as a cleaning crop. It is unexcelled as a provender for cattle, hogs and poultry. Stock relish it, thrive on it and gain on it. It is the most wonderfully prolific, hardy Buckwheat. A yield of 60 bushels per acre is common, while it frequently yields as high as 80 and even 100 bushels. It is a long bloomer; the kernel more than double the size of other varieties. Splendid for Buckwheat flour. About a week earlier than Silver Hull, and on that account can be grown farther north. Oz. 5 cts.; $\frac{1}{4}$ lb. 10 cts.; lb. 30 cts.; 5 lbs. \$1.00 by mail; by express or freight, bu. \$2.75; 2 bu. bag \$4.75; bags free to ship in.

ALFALFA

In many sections this is considered the greatest money making crop grown, and is one of the very richest in food values, doing away with the necessity of purchasing as much commercial feed. Alfalfa often yields 3 to 5 tons per acre at one cutting and can be cut 2 to 4 times during the season; enriches the soil. Best sheep food known; richer than other clovers; fine for dairy cows which produce milk. $\frac{1}{4}$ lb. 20c; lb. 60c; 3 lbs. \$1.40; 6 lbs. \$2.50.

RED TOP-Clean Seed

One of the best known and hardestiest Grasses for pastures, etc. Makes fine lawns. $\frac{1}{4}$ lb. 15c; lb. 50c.

Standard Tree Bands

Protects Trees and Large Shrubbery Against All Climbing Worms, Caterpillars, Moths and Insects

These tree bands are made of heavy waterproof paper, with a sticky, repellent material under the umbrella-like canopy. This canopy protects the "gum stickum" from the weather, as well as from dirt, dust and falling leaves.

No climbing caterpillar or insect can pass this sticky material. It catches them and holds them if they set foot upon it. In fact, many turn back before they get to it.

Attached to the band, on the inside, is a strip of fluffy felt. This felt fills up the depressions in the bark and prevents passage under the band. No cutting away of bark is necessary. The felt fills it up.

These tree bands are guaranteed to be effective for the season, in all weathers.

Put up in rolls, 25 and 100-foot lengths, flat when boxed, mushrooms when tacked on tree.

Easily applied. Simply cut length to encircle tree or shrub. Tack on with small tacks or brads, then raise the outer band until it stands out like an umbrella. It will mushroom as shown in cut and so remain. It only takes a moment.

Choice Flower Seeds

We are Growers of Flower Seeds. Our list is not as large as some because we discard some varieties as inferior, others which do not bloom satisfactorily in many localities and others difficult to grow. We try to have enough and The Best

Flowers usually do best in a rich, light garden soil. Decomposed manure is beneficial to nearly all plants. Asters, Pansies and most plants and bulbs, etc., like plenty of moisture (a rich soil well watered); Portulaccas and a few others will not start till weather and soil are warm. Plants wanted early can be started in fine soil in a sunny window in the house, great care should be taken to keep moist and warm while sprouting. Some hardy seeds will start well out-doors if sown early, but others will rot if earth is cold and wet. Nice mellow beds can be prepared outside for the hardier seeds when weather is warm and they can be transplanted from these when large enough.

Annuals are plants which bloom first season from seed and then perish. Those like Balsams, Nasturtiums and Zinnias, which are easily killed by frost are called half-hardy annuals. Seeds of these should be sown, if wanted for early, in the house, but most sorts will do better if sown outside in a nicely prepared bed and transplanted. All plants should be kept free from weeds, not crowded and be well cultivated.

Abutilon

1—New Hybrids. New and giant flowering sorts of these desirable bloomers known as Chinese Bell Flower and Flowering Maple. Seeds sown early produce flowering plants first season. A handsome perennial shrub loaded with rich, variously colored, bell shaped flowers, often 2 to 3 inches across. Pkt. 7 cts.

5—Double Mixed. One of the most showy and desirable of annual everlasting flowers, having pink and white blossoms. These pretty Immortelles retain their beauty for years when dried. Pkt. of weeds 3 cts.

AFRICAN DAISY HYBRIDS
See Novelty List, Yellow Pages.

Perennials are hardy plants which live year after year. Tender perennials must be kept in house during winter. Hardy perennials are such plants as Hollyhocks, Sweet William, Rocket, etc. Most of these will not bloom till second season. These and biennials are often benefited by a covering of hemlock boughs, straw or something which will protect from the sun and not smother plants.

Biennials produce plants first season which bloom, mature seeds and die the second season, such as Canterbury Bell, Digitalis, etc. They require about the same treatment as perennials.

Greenhouse seeds require the greatest care and should be carefully sown in a box or flower pot in light fine earth in house kept at a temperature of about 70 degrees. Always remember they need to be moist (not wet) and warm. A pane of glass over a flower pot or a wet cloth or paper will retain moisture and assist them to germinate. If thick transplant soon as possible.
